

## REALTIME 10

**SoniClear RealTime 10** software provides *live transcription* for court proceedings and depositions. The software instantly converts spoken words into clear, readable text on screen.

**RealTime 10** is available as a standalone product. It's also included with SoniClear Court Recorder 10 software, enhancing digital court reporting with integrated real-time transcription.

### For Judges

Judges can see every spoken word to confirm testimony as it occurs. One click controls transcription from the bench in real time.

### For Court Reporters

Stay focused on court room activities while confidently capturing every detail. Perform readbacks quickly and accurately.

### For Court Clerks

Ensure the integrity of the record. The real-time transcription provides a visual verification of the recording process for Court Clerks and Hearings Officers.

### Key Features

- **Live Display:** Displays the transcribed text on the screen immediately.
- **Instant Review:** Confirm any details in complex cases by reviewing the transcript on the screen.
- **Exceptional Accuracy:** Transcription accuracy is comparable to real-time feeds from traditional Steno Court Reporters.
- **Supports Digital Reporting:** Optional integration with Court Recorder 10. Combines the real-time transcript with notes entered from the court reporter, for greater detail and faster readbacks.

# HOW REALTIME 10 WORKS

## Captures Speech

Spoken words are captured from a microphone to a computer.

## Sends Audio to Server

Transcription server converts spoken word to text.

## Displays Text in Real Time

Words appear on the screen in just 1-2 seconds.

## Saves Transcript

The transcript can be saved to a file or saved in a SoniClear recording.

Utilizing the latest in AI transcription technology, **SoniClear RealTime 10** delivers an accurate transcript to your screen in real time.

**SoniClear RealTime 10** software runs on Windows 11. It can be used as a standalone program or together with **Court Recorder 10**.

## Instant Real-Time Transcription

**SoniClear RealTime 10** transcribes live spoken words by sending audio to the Cloud Transcription Server through any internet connection. The text is then sent back to your computer and displayed immediately.

All data is encrypted and follows the highest security standards. When the transcript is complete the data only resides on your computer. SoniClear does not have access to the real-time transcript as it is processed on the Transcription Server. On-site hosted transcription is available as an option for large volume transcription projects, or projects requiring high security.

The transcription technology automatically handles a wide variety of accents, and vocabularies, and supports multiple languages such as: English; Spanish; French; German; Italian; and Portuguese.

## Saving Transcripts

**SoniClear RealTime 10:** View the transcript live via computer screen, or save the transcript as a text file.

**Integrated with Court Recorder 10:** Add the transcript to any recording along with any notes taken by the court reporter. All entries can be included in the draft transcript that is exported to Microsoft Word.

## Installation Options

**SoniClear RealTime 10** software license is included free of charge with the purchase of transcription time. Cloud-based usage fees are based on transcription session time. SoniClear offers flexible service options to meet a variety of transcription needs.
