

USB Foot Pedal

Connects to computer USB port

Works just like a dictation transcriber

Handsfree control of playback while typing

Use while recording to add notes

Customizable pedal actions

Handsfree Control While Transcribing

The SoniClear USB Foot Pedal works seamlessly with SoniClear software to simulate traditional transcription foot pedal action. Just plug the foot pedal into any USB port, and SoniClear can be controlled from the three foot pedal controls.

Pressing down the large pedal in the middle causes SoniClear to start playback. Lifting the pedal stops playback and rewinds a few seconds. The left and right foot pedal "buttons" can be used to wind forward and reverse. Or the pedals can be configured to control switching playback channels between a room microphone and stenomask for transcribing court proceedings.

While recording, the foot pedal can be used to enter notes in SoniClear without having to touch the computer keyboard. Press the foot pedal to add a new note or to add the next agenda item.

If you are used to using a foot pedal on a transcription machine, you will immediately be comfortable with the SoniClear USB Foot Pedal.

Part Number: USBFP

USB Foot Pedal for Handsfree Control of Playback, Just Like A Transcription Machine
